#### Remarks

In view of the above amendments and the following remarks, reconsideration of the rejections and further examination are requested.

The Examiner has again refused to consider the two Chinese references listed under the "Foreign Patent Documents" section of the form PTO-1449 submitted with the Information Disclosure Statement (IDS) originally filed on January 11, 2005. In refusing to consider these references, the Examiner indicates that the IDS does not include a "concise explanation of the relevance" of the two references. However, the Examiner's attention is respectfully drawn to M.P.E.P. §609III.A(3) which explicitly states "[w]here the information listed [in the information disclosure statement] is not in the English language, but was cited in a search report or other action by a foreign patent office in a counterpart foreign application, the requirement for a concise explanation of relevance can be satisfied by submitting an English-language version of the search report or action which indicates the degree of relevance found by the foreign office." Therefore, it is clear from this section of the M.P.E.P. that an English-language version of a foreign office action indicating the degree of relevance satisfies the concise explanation of relevance requirement.

It is noted that the two references in question were cited in a Chinese Office Action and both the Chinese Office Action and an English-language version of the Chinese Office Action were submitted to the PTO at the time of filing the IDS. Thus, the requirement for a concise explanation of relevance has been met for these references. Based on the submission of these documents, it is unclear as to why the Examiner continues to refuse to consider these references. However, it is respectfully requested that the Examiner now consider these references and forward a completely initialed copy of the form PTO-1449 originally filed on January 11, 2005. Enclosed herewith are copies of both the Chinese Office Action and the English-language version of the Chinese Office Action for the Examiner's review in case they have been misplaced by the PTO and this is the reason for the Examiner's failure to consider the references.

Claims 1-10, 12-21, 23 and 24 have been rejected under 35 U.S.C. §102(e) as being anticipated by Gish (US 6,038,590). Claims 11 and 22 have been rejected under 35 U.S.C. §103(a) as being unpatentable over Gish in view of Abdelnur (US 6,212,640).

Claim 1 has been amended so as to include the limitations of dependent claims 7-9, and claim 12 has been amended so as to include the limitations of dependent claims 18-20. Since

claims 1 and 12 have been amended so as to include limitations from claims previously presented, the amendments should necessarily be given due consideration by the Examiner.

Further, claims 7-9 and 18-20 have been canceled without prejudice or disclaimer to the subject matter contained therein. Also, it is noted that claims 10 and 11 have been amended so as to depend from claim 1, and claims 21 and 22 have been amended so as to depend from claim 12.

The above-mentioned rejections are respectfully traversed and submitted to be inapplicable to the claims for the following reasons.

Claim 1 is patentable over Gish, since claim 1 recites an information terminal device for processing instruction data describing an instruction transmitted from a server, the information terminal device including, in part, a determining unit for determining an application corresponding to the instruction data; an operation control unit for extracting, from analysis result data, message data for display to a user, and generating a display message by replacing at least part of a default message included in the application and previously set for display to the user with the display message represented by the message data; an execution checking unit for determining whether the application is to be executed based on the message data extracted by the operation control unit; an application executing unit for, when the execution checking unit determines that the application is to be executed, extracting from the analysis result data operation data representing an operation for the message data, and carrying out an operation based on the application by following the operation data, wherein a display unit displays the display message generated by the operation control unit for prompting the user to answer whether to execute the application, and when the user enters an answer as to whether to execute the application based on the display message displayed on the display unit, the execution checking unit determines whether the application is to be executed. Gish fails to disclose or suggest the execution checking unit of claim 1.

Gish discloses a computing system that includes a client (front end) program and server (back end) program that are coupled via a network. Upon application start-up, the client program executes a start-up program that collects information about the client and sends the information to the server. This information can include a user name, password and application name. Upon receiving the information, the server executes an authentication program to authenticate the client. If the client is authenticated, the server then invokes an application (app)

manager based on the application name. The app manager handles application definitions installed on the server. The app manager selects the appropriate back end program stored on the server and initiates processing of the back end program on the server. The app manager also selects the application front end program associated with the back end program, which is also stored on the server, and downloads the front end program to the client to be executed thereby. (See column 18, lines 57-67; column 48, lines 14-19; and column 52, lines 44-56).

In the rejection, the start up program (applet) executed by the client when a user requests the execution of an application and the app manager executed by the server are both referenced as corresponding to the claimed execution checking unit. However, the execution checking unit is recited as being operable to determine whether an application is to be executed based on message data. Further, the message data is recited as being extracted from analysis result data, which is generated based on instruction data transmitted from a server. In other words, the execution checking unit makes a determination whether the application is to be executed based on the message data which is indirectly based on the instruction data from the server. On the other hand, Gish fails to disclose or suggest that the start up program is in any way indirectly based on data transmitted from the server. Instead, it appears that the start up program is executed by the client prior to contacting the server, since the start up program transmits the user name and password to the server in order for the server to authorize the client and then transmit the appropriate front end program back to the client. Further, the app manager makes the program selections based on the information transmitted from the client and is itself located on the server. As a result, Gish fails to disclose or suggest the present invention as recited in claim 1.

Further, Abdelnur is relied upon in the Office Action as disclosing digital signature data. However, it is apparent that Abdelnur fails to disclose or suggest the above-discussed feature of claim 1.

As for claim 12, it is patentable over Gish and Abdelnur for reasons similar to those discussed above in support of claim 1. That is, claim 12 recites, in part, an execution checking operation of determining whether an application is to be executed based on message data extracted in an operation controlling operation, wherein when a user enters an answer as to whether to execute the application based on a display message displayed in a display operation,

the execution checking operation determines whether the application is to be executed, which feature is not disclosed or suggested by the references.

Because of the above-mentioned distinctions, it is believed clear that claims 1-6, 10-17 and 21-24 are allowable over the references relied upon in the rejections. Furthermore, it is submitted that the distinctions are such that a person having ordinary skill in the art at the time of invention would not have been motivated to make any combination of the references of record in such a manner as to result in, or otherwise render obvious, the present invention as recited in claims 1-6, 10-17 and 21-24. Therefore, it is submitted that claims 1-6, 10-17 and 21-24 are clearly allowable over the prior art of record.

In view of the above amendments and remarks, it is submitted that the present application is now in condition for allowance. The Examiner is invited to contact the undersigned by telephone if it is felt that there are issues remaining which must be resolved before allowance of the application.

Respectfully submitted,

Masashige MIZUYAMA et al.

Refer to the text of this Notice for the specific analyses of the conclusive opinion.

7.	Based on the above conclusive opinion, the Examiner deems that:  The applicant shall amend the application documents in accordance with the requirements raised in the text of the Notice.
	The applicant shall discuss in his observations reasons why this application for patent can be granted a patent right, and amend the portions indicated in the text of the Notice which have been deemed as not conforming with the provisions, or no patent right shall be granted.
	There are no substantive contents in the application for patent that can be granted a patent right. If the applicant does not present reasons or the reasons presented are not sufficient, the application shall be rejected.
8.	The applicant is asked to note the following items:
	(1) According to the provision of Article 37 of the Patent Law, the applicant shall submit his observations within four months from the receipt of this Notice. Where, without justified reasons, the applicant does not respond at the expiration of said date, the application shall be deemed to have been withdrawn
	(2) The applicant shall amend his application according to Article 33 of the Patent Law. The amended documents shall be in duplicate, and the form, in conformity with the relevant provisions in the Examination Guide.
	(3) The applicant and/or his agent can not, without first making an appointment, go to the Patent Office to have an interview with the Examiner.
	(4) The observations and/or the amended documents shall be mailed or delivered to Department of Receipt, the Patent Office of the State Intellectual Property Office. No documents shall possess legal effects if not mailed or delivered to Department of Receipt.
9.	The text portion of this Notice totals 2 page(s), and includes the following attachment(s):  duplicate copy(ies) of cited comparison document(s), altogether 2 copy(ies) I pages.
